

## List of risk levels and inspection and quarantine supervision measures for imported non-edible animal products

category	product	risk level	Inspection and quarantine supervision measures
skin	Raw hides and skins (fresh, dried, salted wet, salted, salted dried skins, excluding amphibians and reptiles)	Level I	Assessment of the regulatory system of the exporting country or region, registration of overseas production, processing and storage enterprises; an "Entry Animal and Plant Quarantine License" must be obtained before entry; quarantine certificates must be inspected upon entry and inspection and quarantine must be implemented; storage and storage in designated enterprises after entry Processing and subject to inspection and quarantine supervision.
	Amphibian and reptile skins	Level II	Assessment of the exporting country or region's regulatory system, registration of overseas production, processing and storage enterprises; an "Entry Animal and Plant Quarantine License" must be obtained before entry; quarantine certificates must be inspected and inspection and quarantine implemented upon entry.
	Untanned animal hides processed by gray hides (processed in an environment with a pH value not lower than 14 for at least 2 hours), pickled hides (processed in an environment with a pH value not higher than 2 for at least 1 hour) and other equivalent methods ; tanning Animal skins ( in areas where relevant animal diseases are prevalent)	Level III	Assessment of the regulatory system of the exporting country or region, registration of overseas production, processing and storage enterprises; inspection of quarantine certificates upon entry and implementation of inspection and quarantine.
	Tanned animal skins ( no relevant animal disease endemic areas)	Level IV	Inspection and quarantine are implemented upon entry.

category	product	risk level	Inspection and quarantine supervision measures
Wool and fiber	Raw wool, raw down, unwashed feathers and down, unprocessed animal bristles and tails	Level I	Assessment of the regulatory system of the exporting country or region, registration of overseas production, processing and storage enterprises; an "Entry Animal and Plant Quarantine License" must be obtained before entry; quarantine certificates must be inspected upon entry and inspection and quarantine must be implemented; storage and storage in designated enterprises after entry Processing and subject to inspection and quarantine supervision.
	Wash wool and velvet, wash feathers and down, wash horse and cow (mane) and tail hair, boil pig bristles, and wash wool lint.	Level III	Assessment of the regulatory system of the exporting country or region, registration of overseas production, processing and storage enterprises; inspection of quarantine certificates upon entry and implementation of inspection and quarantine.
	Skimmed or dyed decorative feathers, down, carbonized wool, carded wool, tops; feather dusters; raw silk	Level IV	Inspection and quarantine are implemented upon entry.
bone hoof angle	Bones, hooves and horns of ungulates, rodents and birds, not processed or primarily processed	Level I	Assessment of the regulatory system of the exporting country or region, registration of overseas production, processing and storage enterprises; an "Entry Animal and Plant Quarantine License" must be obtained before entry; quarantine certificates must be inspected upon entry and inspection and quarantine must be implemented; storage and storage in designated enterprises after entry Processing and subject to inspection and quarantine supervision.
	Hippopotamus and other animal teeth, defatted (processed at no less than 80°C for at least 30 minutes) bones, hooves and horns of animals (excluding amphibians and reptiles)	Level II	Assessment of the exporting country or region's regulatory system, registration of overseas production, processing and storage enterprises; an "Entry Animal and Plant Quarantine License" must be obtained before entry; quarantine certificates must be inspected and inspection and quarantine implemented upon entry.

category	product	risk level	Inspection and quarantine supervision measures
	Amphibian and reptile bones, shells, horns, scales, bone oil	Level III	Assessment of the regulatory system of the exporting country or region, registration of overseas production, processing and storage enterprises; inspection of quarantine certificates upon entry and implementation of inspection and quarantine.
	Fossil animal bones, hooves, horns, and teeth such as mammoth teeth; cultural artifacts made from deeply processed animal bones, hoofs, and teeth; grinding bowls, tea spoons, combs, shoe horns, and other animal horns processed from animal horns Products	Level IV	Inspection and quarantine are implemented upon entry.
grease	Unprocessed animal (excluding amphibians and reptiles) adipose tissue and its cold-pressed oils, non-high-temperature refined ruminant oils from countries or regions with negligible BSE risk	Level I	Assessment of the regulatory system of the exporting country or region, registration of overseas production, processing and storage enterprises; an "Entry Animal and Plant Quarantine License" must be obtained before entry; quarantine certificates must be inspected upon entry and inspection and quarantine must be implemented; storage and storage in designated enterprises after entry Processing and subject to inspection and quarantine supervision.
	Lanolin ; high-temperature (not lower than 80 °C for at least 30 minutes) refined animal fats ( except high-temperature refined ruminant fats in countries or regions where BSE risks are negligible ) , amphibian and reptile fats	Level III	Assessment of the regulatory system of the exporting country or region, registration of overseas production, processing and storage enterprises; inspection of quarantine certificates upon entry and implementation of inspection and quarantine.
	Amphibian and reptile oils and fats refined at high temperature (not less than 80 °C for at least 30 minutes)	Level IV	Inspection and quarantine are implemented upon entry.
specimen	Preserved animal specimens	Level IV	Inspection and quarantine are implemented upon entry.
silkworm	Unprocessed silkworm cocoons, silkworm	Level I	Assessment of the regulatory system of the exporting country

<b>category</b>	<b>product</b>	<b>risk level</b>	<b>Inspection and quarantine supervision measures</b>
products	chrysalises, cut cocoons, long spits, stagnant heads		or region, registration of overseas production, processing and storage enterprises; an "Entry Animal and Plant Quarantine License" must be obtained before entry; quarantine certificates must be inspected upon entry and inspection and quarantine must be implemented; storage and storage in designated enterprises after entry Processing and subject to inspection and quarantine supervision.
	Luomian	Level III	Assessment of the regulatory system of the exporting country or region; inspection of quarantine certificates and implementation of inspection and quarantine upon entry
	raw silk	Level IV	Inspection and quarantine are implemented upon entry.
bee products	Raw honeycomb, beeswax, propolis	Level II	Assessment of the exporting country or region's regulatory system, registration of overseas production, processing and storage enterprises; an "Entry Animal and Plant Quarantine License" must be obtained before entry; quarantine certificates must be inspected and inspection and quarantine implemented upon entry.
	Other bee products	Level III	Assessment of the regulatory system of the exporting country or region; inspection of quarantine certificates and implementation of inspection and quarantine upon entry.
Aquatic products	Unprocessed or primary processed aquatic products and aquatic animal by-products such as shrimp shells, crab shells, and clam shells	Level II	Assessment of the exporting country or region's regulatory system, registration of overseas production, processing and storage enterprises; an "Entry Animal and Plant Quarantine License" must be obtained before entry; quarantine certificates must be inspected and inspection and quarantine implemented upon entry.
	Skin, bones, scales and oils of fish; bones and oils of soft bodies	Level III	Assessment of the regulatory system of the exporting country or region; inspection of quarantine certificates and implementation of inspection and quarantine upon entry.

category	product	risk level	Inspection and quarantine supervision measures
	Processed shells, shrimp shells, crab shells and other aquatic animal by-products; corals and their products; pearls and their products; natural sponges and their products	Level IV	Inspection and quarantine are implemented upon entry.
Other non-food animal products	Unprocessed or primarily processed animal offal, tissue and digestive juices	Level I	Assessment of the regulatory system of the exporting country or region, registration of overseas production, processing and storage enterprises; an "Entry Animal and Plant Quarantine License" must be obtained before entry; quarantine certificates must be inspected upon entry and inspection and quarantine must be implemented; storage and storage in designated enterprises after entry Processing and subject to inspection and quarantine supervision.
	Animal-derived fertilizers, non-BSE-derived bone glue from countries or regions with negligible BSE risk	Level II	Assessment of the exporting country or region's regulatory system, registration of overseas production, processing and storage enterprises; an "Entry Animal and Plant Quarantine License" must be obtained before entry; quarantine certificates must be inspected and inspection and quarantine implemented upon entry.
	Deeply processed or refined milk-derived products such as casein, deeply processed or refined animal-derived by-products such as chondroitin sulfate, dibasic calcium phosphate, and bile salts, and other animal-derived gelatin (excluding non-BSE risk negligible countries) Or regional cattle and sheep derived bone glue)	Level III	Assessment of the regulatory system of the exporting country or region; inspection of quarantine certificates and implementation of inspection and quarantine upon entry.
	Chemically denatured animal tissues and organs for scientific research; industrial gelatin for scientific research	Level IV	Inspection and quarantine are implemented upon entry.

**Remark:**

1. Products with level II risks and below are not subject to epidemic restrictions such as foot-and-mouth disease and avian influenza, but should comply with veterinary health requirements such as the OIE Code; relevant animal diseases include foot-and-mouth disease, avian influenza, bovine nodular dermatosis, sheep pox and goat pox , African swine fever and swine fever.

2. Countries or regions with negligible BSE risks shall be assessed and determined by the General Administration of Customs.

3. Relevant product definition:

Wool shedding refers to the broken hair and loose hair that are combed after the raw wool has been treated with high temperature and acid, especially after the carbonization and weeding process.

Long spinning refers to the silk spinning raw material processed from the messy silk fibers removed from the silkworm cocoons during the reeling process.

Zhitou refers to the silk spinning raw material processed and sorted from the pupa lining left after the silkworm cocoon has been reeled.

Noil refers to the short fibers remaining after the silk spinning raw materials (long fibers, lag fibers, etc.) have been refined and circular combed to extract the long fibers.

Raw silk refers to the product obtained by reeling silkworm cocoons (boiling silk in 80 °C warm water, etc.).

4. This list is for reference and dynamic adjustment during entry quarantine approval and other work.
